

# Stop running F&B supply across chats, sheets, and guesswork.

Supplify is the operating platform for procurement and supply. One order, from the price you agree to the invoice you pay.

SOURCE

ORDER

FULFILL

DELIVER

RECEIVE

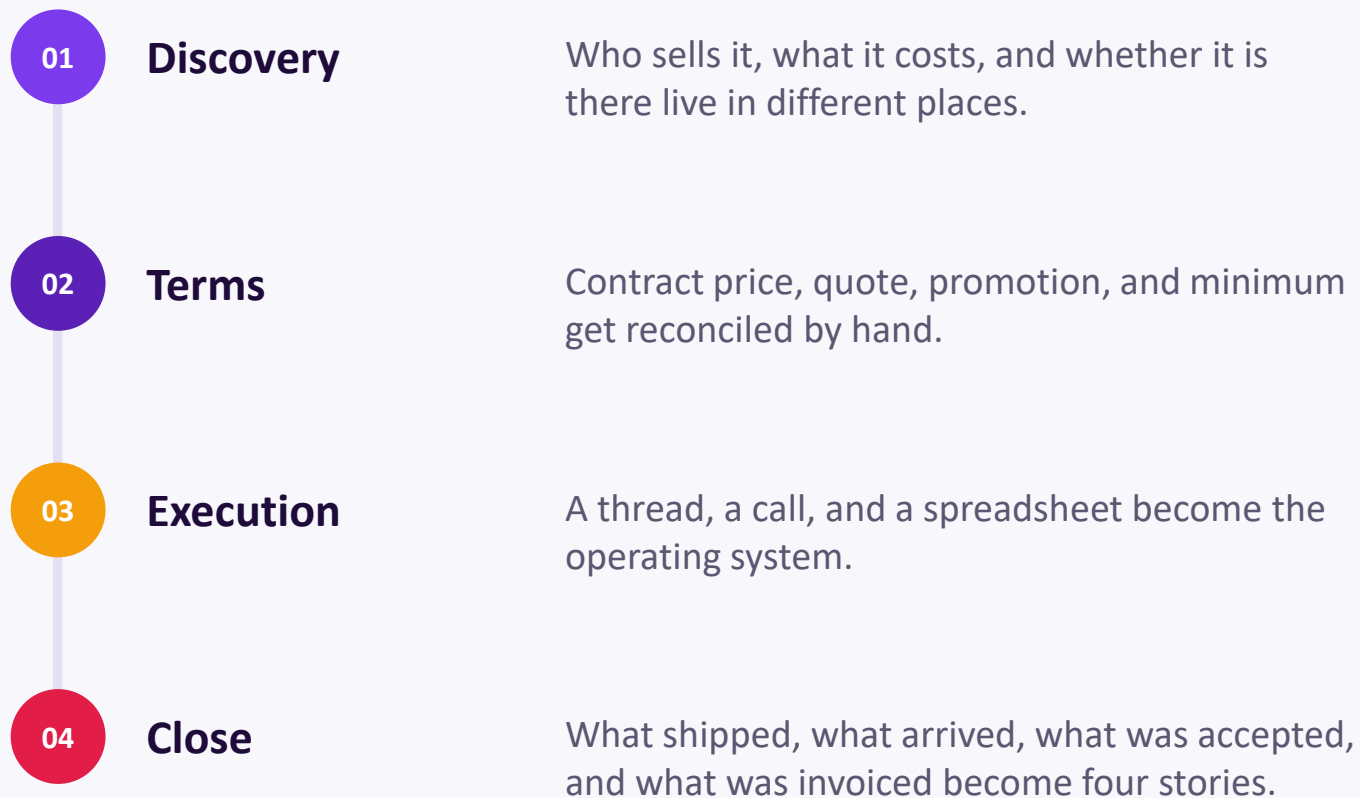

CONTROL

Built for restaurant teams and suppliers who need the work after checkout—not another catalog inbox.

# Every order still dies in a group chat.

Buying can start in a catalog. The truth scatters the moment the work begins.

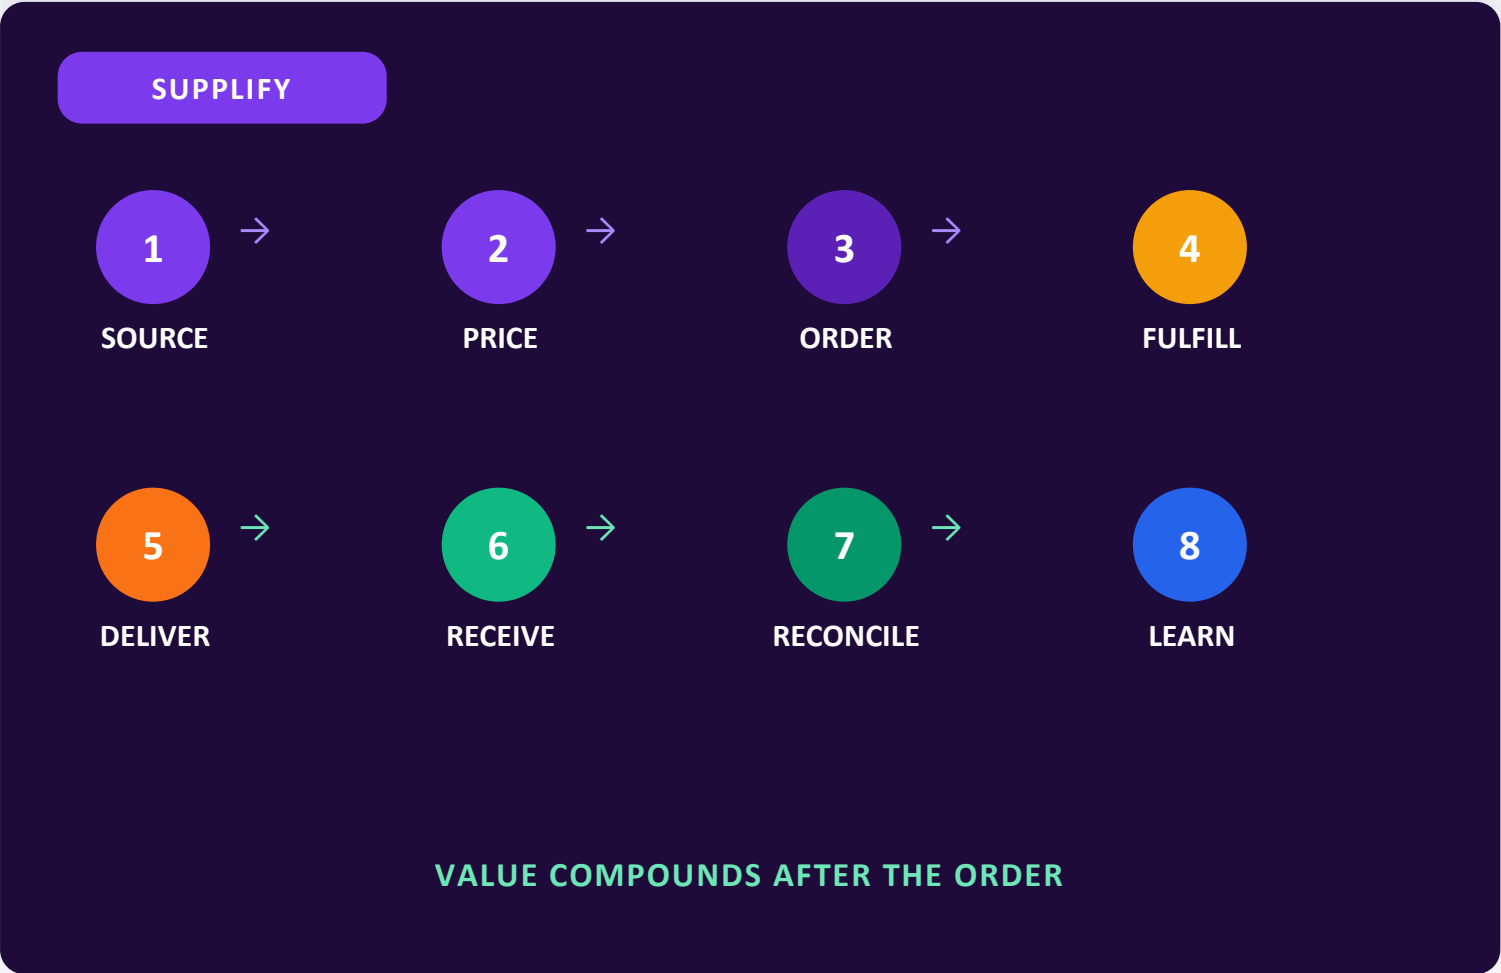

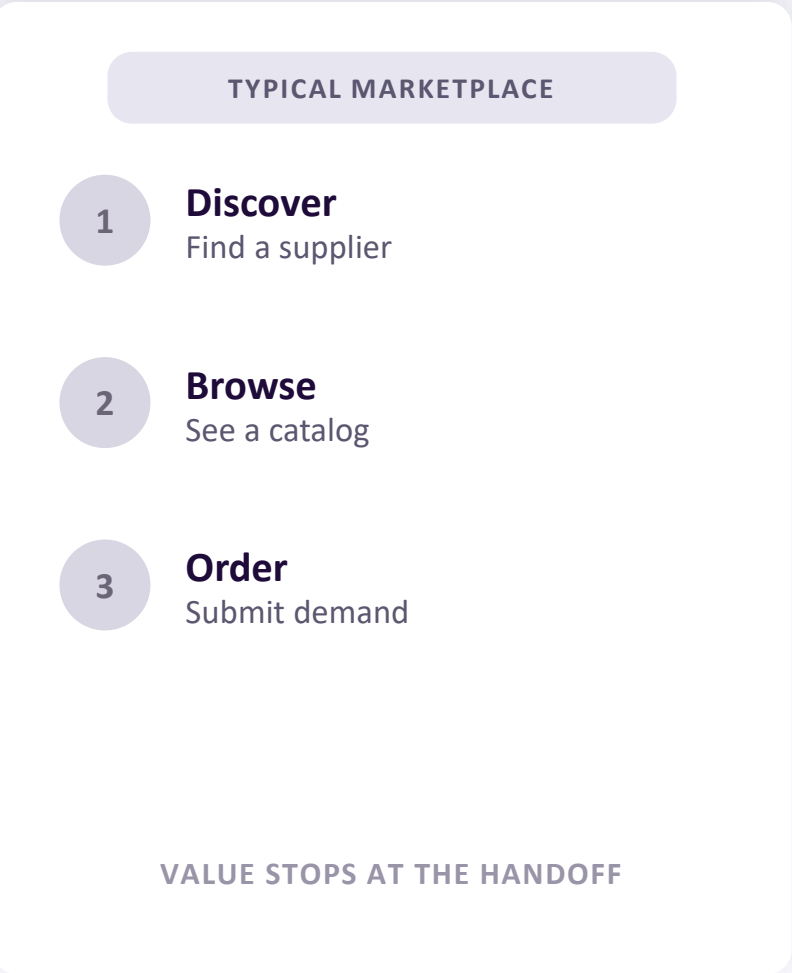

## THE REAL COST

**Your team reconstructs  
yesterday instead of  
controlling tomorrow.**

ONE ORDER · MANY VERSIONS OF TRUTH

# Where others stop at “order placed,” Supplyfy keeps going.

A marketplace introduces two parties. An operating platform keeps the order true after the handshake.

# Restaurants get control. Suppliers get a plan they can run.

The buyer sees the relationship. The supplier sees the work. Both are looking at one transaction.

SEEDDED DEMO UI

Customer terms in. Warehouse, route, proof, and receivable out.

# Delivered is not received. Invoiced is not paid.

Same order. Separate events. Mixing them is how disputes start.

## THE PRICE LOCKS

Checkout revalidates on the server. The order line becomes a snapshot—not a live link back to the catalog.

## INTELLIGENCE EXPLAINS

It is read-only. It does not place orders, move stock, set prices, or assign drivers.

HOW YOU START

# Pay for operating depth, not a longer menu.

Thirty days to try it. Then the plan follows branches, active customer locations, and how deep you run.
